

Game Instructions

You are going to take on the role of a water droplet as it goes through the modern wastewater treatment process. As a water droplet, you will experience the different stages of the process, moving just as quickly (or as slowly!) as a water droplet would. As you play, consider why each stage of treatment is necessary and what makes each stage of the process unique.

To Win: Reach the finish line: continue play until all players have reached one of the finish lines.

Who Goes First: The player whose game piece color is closest to the start of a rainbow goes first and gameplay continues clockwise. Rainbow order: Red, Orange, Yellow, Green, Blue, Indigo, Violet

Special Rules: When you *land on* an space with a directional arrow, you should follow that path, moving to the next space in that direction that does not contain an arrow. If you *pass through* a space with a directional arrow, you should ignore it and continue on a straight path.
